Subject: FERC orders and NC utilities

Sarah, Do you have a sense of whether N.C.'s electric utilities are subject to FERC orders? In particular, I'm trying to understand the applicability of the following orders to DEP and DEC. I know this is a pretty specific question, so let me know if it's not something you are familiar with.

1. FERC 745: Demand Response resources that are highly available be compensated at market rates
2. FERC 750: Fast acting batteries that can be used to support grid reliability should be compensated just like other supply side resources that serve in this capacity
3. FERC 755: Distributed Energy Resources that can be measured, verified, and operated cooperatively with the grid should be compensated as large power plants are compensated....at market rates.
